

Coronavirus Disease (COVID-19)

1. What is a coronavirus?

There are many types of coronaviruses that cause disease in humans and animals. These viruses are all different and are only distantly related to each other. In humans, some coronaviruses cause mild upper-respiratory tract illness like the common cold, while a few can cause more severe disease such as SARS or MERS. In animals, there are coronaviruses that can cause a variety of symptoms in pets including respiratory disease or diarrhea, depending on the type of animal and the exact type of coronavirus. To date, coronaviruses that cause disease in pets are not known to be contagious to people.

2. What is COVID-19?

Some coronaviruses from animals can evolve (change) into a new human coronavirus that can spread from person to person. This is what happened with the new coronavirus known as SARS-CoV-2 which causes the disease known as COVID-19 in humans.

3. How does COVID-19 spread?

Like other respiratory illnesses, such as influenza, human coronaviruses most commonly spread from person to person through:

- Droplets produced through coughing and sneezing
- Close personal contact, such as caring for an infected person
- Touching an object or surface with the virus on it, then touching your mouth, nose, or eyes before washing your hands

4. Can pets become sick with and spread COVID-19?

To date, there are no reports of pets becoming sick with COVID-19 or of them spreading it to people or other pets. In Hong Kong in February, one dog tested positive for COVID-19 on multiple tests after being in contact with its owner who had also tested positive for COVID-19. The dog has not had any signs of illness and continues to be quarantined for further testing. At this time, there is no evidence that pets, including dogs, can spread COVID-19.

5. I have a pet. What should I do?

Although the risk of COVID-19 infection in pets is low, there are other diseases that can cause illness in animals and spread from animals to people. Because of this, washing hands after being around animals is always a good idea. Include pets in your family's preparedness planning. Have a two-week supply of pet food and pet medicines available.

Key Messages:

There is no evidence that pets can become sick with or spread COVID-19.

Pets can spread other diseases to people, however, so wash your hands after handling pets.

Good hygiene and veterinary care always helps keep pets and people healthy.

Coronavirus Disease (COVID-19)

6. I am sick with COVID-19 and I have pets or other animals. What should I do?

You should restrict contact with pets and other animals while you are sick with COVID-19, just like you would around other people. When possible, have another member of your household care for your animals while you are sick. If you are sick, avoid contact with your pet, including petting, snuggling, being kissed or licked, and sharing food. If you must care for your pet or be around animals while you are sick, wash your hands before and after you interact with pets and wear a facemask. Also, please notify your public health point of contact that you have animals in your home.

7. What precautions should be taken for animals that have recently been imported (for example, by shelters, rescue groups or as personal pets) from China?

Animals imported from China will need to meet CDC and USDA requirements for entering the United States. As with any animal introduced to a new environment, animals recently imported from China should be observed daily for signs of illness. If an animal becomes ill, the animal should be examined by a veterinarian. Call your local veterinary clinic before bringing the animal into the clinic and let them know that the animal was recently in China.

There are simple steps you can take to protect the health of your pet and family from most diseases:

- Establish a relationship with a veterinarian for your pet.
- Keep your pet's vaccinations current and use flea and tick control.
- Wash your hands after handling your pet, its bedding and toys, or bowls.
- If you are sick, keep your distance from other people and pets and wash your hands frequently.
- If your pet is sick, contact a veterinarian. Keep it away from other pets until it is better. Wash your hands each time after caring for it.
